

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. In compliance with this law, electric utilities and suppliers provide an Environmental Disclosure Statement for the 12 months ending every quarter.

The information in this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between April 1, 2009 and March 31, 2010.

In addition to the electricity sources shown on the table and pie chart, ComEd also purchased renewable energy certificates (RECs) in the spring of 2008 and 2009 to fulfill its obligation under the Illinois Renewable Portfolio Standard. RECs represent the beneficial environmental attributes associated with renewable generation resources such as wind, hydroelectric, biomass, and solar. One REC is created for each megawatt hour of energy produced by a renewable generator. In 2008, ComEd procured a total of 796,040 RECs, of which approximately 72 percent

were from wind generators located in Illinois and in nearby states. In 2009, ComEd procured a total of 1,564,360 RECs, 75 percent of which were from wind generators located in Illinois.

ComEd Customers Reduce Electricity Usage, Help Environment During 3rd Annual Earth Hour

Residential and business customers across northern Illinois joined the fight against global warming by reducing electricity usage during the 3rd annual Earth Hour on March 27.

From 8:30 to 9:30 p.m., ComEd residents, businesses and municipalities observed Earth Hour by turning off lights and other unneeded sources of electricity. ComEd, which served as local sponsor of the global event for the third year, registered a noticeable decline in electricity usage of about one percent in its northern Illinois service territory.

This reduction in electricity usage is estimated to be about 100 megawatt hours. This is equivalent to removing 124,000 pounds of carbon dioxide from the atmosphere or planting 15 acres of trees. ComEd's support of Earth Hour reflects its commitment to raise awareness about global climate change and the benefits of energy efficiency.

Environmental Disclosure Information

Twelve Months Ending March 31, 2010

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Admn. Code 421.

| Sources of Electricity Supplied for the 12 months ending March 31, 2010 | Percentage of Total |
|--|---------------------|
| Biomass power | 1% |
| Coal-fired power | 34% |
| Hydro power | 1% |
| Natural gas-fired power | 5% |
| Nuclear power | 58% |
| Oil-fired power | 0% |
| Solar power | 0% |
| Wind power | 1% |
| Other resources | 0% |
| Unknown resources purchased from other companies | 0% |
| TOTAL | 100% |

Sources of Electricity Supplied for the 12 months ending March 31, 2010

AVERAGE AMOUNTS OF EMISSIONS² and AMOUNT OF NUCLEAR WASTE³ per 1000 kilowatt-hours (kWh) PRODUCED FROM KNOWN SOURCES for the 12 months ending March 31, 2010

| | |
|--------------------------|-------------------|
| Carbon dioxide | 749.90 lbs. |
| Nitrogen oxides | 1.13 lbs. |
| Sulfur dioxide | 3.60 lbs. |
| High level nuclear waste | 0.006 lbs |
| Low level nuclear waste | 0.0004 cubic feet |

¹ These figures constitute the aggregation of information provided by ComEd's wholesale energy suppliers, many of whom have indicated that their source is the "PJM system mix." The PJM system mix is the collective generation produced within the PJM interconnection, which is the regional transmission organization that maintains the safety, reliability, and security of the transmission system and operates an efficient and effective wholesale electric market in 13 states and the District of Columbia. ComEd's electric service territory is within the PJM footprint.

² The source for the baseline emissions data for the portion of the emissions that are associated with PJM system mix is PJM Environmental Information Services, Inc., (www.pjm-eis.com). For energy that is sourced from the PJM system mix, emissions rates are calculated using the most current emissions data from the Quarterly PJM System Mix by Fuel Reports. These reports exclude the effects of energy imports, exports, external generation and behind-the-meter generation. Those quarterly reports also exclude the effects of any claims on any specific component(s) of the mix.

³ Nuclear Waste rates were calculated based on Generation Net for Sale.
